

Mass loss of Betelgeuse and evolved stars, from the photosphere to the ISM

Pierre Kervella
LESIA, Observatoire de Paris

Betelgeuse (and RSGs)

- $\sim 10\text{-}20 M_{\text{sun}}$, $T_{\text{eff}} \sim 3600 \text{ K}$, $L > 100\,000 L_{\text{sun}}$
- $R \sim 650 - 1000 R_{\text{sun}}$
- Density $\sim 40 \text{ mg/m}^3$ (Sun: 1400 kg/m^3)

Betelgeuse (and RSGs)

- $\sim 10\text{-}20 M_{\text{sun}}$, $T_{\text{eff}} \sim 3600 \text{ K}$, $L > 100\,000 L_{\text{sun}}$
- $R \sim 650 - 1000 R_{\text{sun}}$
- Density $\sim 40 \text{ mg/m}^3$ (Sun: 1400 kg/m^3)
 - What is the structure of the convection ?

Betelgeuse (and RSGs)

- $\sim 10\text{-}20 M_{\text{sun}}$, $T_{\text{eff}} \sim 3600 \text{ K}$, $L > 100\,000 L_{\text{sun}}$
- $R \sim 650 - 1000 R_{\text{sun}}$
- Density $\sim 40 \text{ mg/m}^3$ (Sun: 1400 kg/m^3)
 - What is the structure of the convection ?
 - How does the star lose its mass ?

Betelgeuse (and RSGs)

- $\sim 10\text{-}20 M_{\text{sun}}$, $T_{\text{eff}} \sim 3600 \text{ K}$, $L > 100\,000 L_{\text{sun}}$
- $R \sim 650 - 1000 R_{\text{sun}}$
- Density $\sim 40 \text{ mg/m}^3$ (Sun: 1400 kg/m^3)
 - What is the structure of the convection ?
 - How does the star lose its mass ?
 - What is the structure of its envelope ?
 - Molecular and dust chemistry ?
 - Dust-gas coupling ?

Betelgeuse (and RSGs)

- $\sim 10\text{-}20 M_{\text{sun}}$, $T_{\text{eff}} \sim 3600 \text{ K}$, $L > 100\,000 L_{\text{sun}}$
- $R \sim 650 - 1000 R_{\text{sun}}$
- Density $\sim 40 \text{ mg/m}^3$ (Sun: 1400 kg/m^3)
 - What is the structure of the convection ?
 - How does the star lose its mass ?
 - What is the structure of its envelope ?
 - Molecular and dust chemistry ?
 - Dust-gas coupling ?
 - How does the star interact with the ISM ?

Betelgeuse (and RSGs)
